## Summarise the information given in the table below.

| Year | 个otal Population $\boldsymbol{*}$ | Population <br> Aged 75+ | Percentage <br> Aged 75+ |
| :--- | :--- | :--- | :--- |
| 2015 | 64.8 million | 5.4 million | $8.33 \%$ |
| 2020 | 67.2 million | 6.1 million | $9.08 \%$ |
| 2025 | 69.4 million | 7.3 million | $10.52 \%$ |
| 2030 | 71.4 million | 8.1 million | $11.34 \%$ |
| 2035 | 73.2 million | 8.9 million | $12.16 \%$ |
| 2050 | 77 million | 9 million | $11.69 \%$ |
| 2070 | 82 million | $11-12$ million | 13.41 to 14.63\% |

This table compares the UK's 55-year projected growth of the number of people over the age of 75 with that of the total population. It is estimated that in the 20 years from 2015, the total population of the UK will grow by almost 10 million, from 64.8 million in 2015 to 73.2 million in 2035. The number of over $75^{\prime}$ 's will also increase significantly, from 5.4 million (2015) to 8.9 million (2035), which is an increase of nearly $4 \%$.

The estimated figures for 2050 and 2070 indicate that this trend will continue, and the total population will be as high as 82 million by 2070. Although the number of people aged 75 or older will remain relatively stable between 2035 ( 8.9 million) and 2050 (9 million), the number will continue to swell and by 2070 nearly $15 \%$ of the population (11 - 12 million) will be aged 75 or older. Overall, we can expect the number of people aged over 75 to double by 2070.
